

Please disallow broadband over power lines (BPL). The reason that I wish you to not pass this is because of my hobby, which is listening to shortwave. Also when this happens it is supposedly ending ham radio operations, which is a vital service in the event of a catrastophe. Broadband is certainly not going to work when the power is out. But a battery is all that is needed to receive shortwave broadcasts in an emergency. Also only a generator is needed for a ham to transmit during an emergency. Please consider not allowing this Broadband over power lines (BPL) to become a reality.

Sincerely,

Jeffery R. Buck
